

DESIGN STATEMENT - ff-g-rfb-bulk-breach

12 Frenchs Forest Road East, Frenchs Forest (fictional) (Zone R3; Site G, Frenchs Forest Precinct)

The proposed four-storey residential flat building provides four dwellings over a basement car park. The design responds to the precinct's rising skyline with a stepped roof form that, in the applicant's view, preserves winter solar access to the street and to the lagoon views to the south.

A high standard of architectural design, materials and detailing will be achieved: a boardmarked weatherboard and natural stone palette, dark metal joinery, and a recessed entry terrace that contributes to the public domain. Two mature trees are retained and permeable paving is provided across the street-facing area.

The building's 13.5 m height is justified as consistent with the precinct's west-to-east height transition. Overshadowing to adjacent lots will be negligible given the site's orientation.

The applicant submits that the development exhibits 'design excellence' within the meaning of clause 8.5 of the Warringah Local Environmental Plan 2011 and that all site-specific requirements of Part 8 of that Plan are met.
